John--i plotted up the Geoprobe lat/longs Jack sent. is GP-24 correct? my plot shows it pretty much due north of GP-23, is further north and west than the map figure i was basing my picks of the new locations shows it. can jack double check the numbers?

Also, can Autumwood send lat/longs for the proposed additional Geoprobe locations? The map locations are not informative and i'd like to double check things. depending on how things look, i may want to ask for altered GP locations.
